STORYTELLER, Danny Day

1492

Christopher Columbus, an Italian navigator in the service of Spain searched for a Western route to Asia with his three ships the Niña, Pinta and Santa Maria in 1492. He believed you could reach the East by sailing West. Although not the first European to land in the Americas, he commanded the first European expedition to cross the Atlantic discovering the West Indies followed by permanent settlement. The first Columbus Day was held October 12, 1792.

1776

The Declaration of Independence was adopted on July 4, 1776. This was one of the most important American historical documents ever written. With this document, the American colonies declared their freedom from British rule. The Declaration was signed by fifty-six members of the Continental Congress.

1879

Thomas Alva Edison (1847-1931) invented electricity with the first incandescent lamp in 1879. This American inventor patented more than 1000 inventions. His first invention was the vote recorder in 1868. Following his love for electricity, he created the Edison General Electric Company, which later formed the General Electric Company of today.

1886

The Statue of Liberty is a symbol of freedom and opportunity for millions of immigrants entering the United States through Ellis Island, New York. A gift of the French people, dedicated in 1886, the statue commemorates friendship between our two nations and is formally known as "Liberty Enlightening the World."

1908

Henry Ford (1863-1947) developed the first mass produced "Model-T" automobile that the average person could afford. Although his first automobile (which still runs today), was completed in 1896, it was only for the wealthier buyer. More than 15 million "Model-Ts" were sold over a period of 19 years. He pioneered in the use of assembly line methods, along with cutting the work day down to 8 hours and setting of minimum wage at $5.00/day, up from $1.00/day.

1920

Women gained the right to vote when the 19th amendment to the Constitution was ratified. Four women laid the foundation of the woman's suffrage movement in the United States: Elizabeth Cady Stanton, Lucretia Mott, Martha C. Wright, and Mary Ann McClintock. Although the amendment allowing women the right to vote was defeated for many years in Congress, the active role of women in World War I helped to greatly change the picture.

1929

The Stock Market Crash "Black Friday," October 28, 1929 the United States Stock Exchange collapses. On this day the United States Securities lost $26 billion in value. This event not only marked the beginning of a world economic crisis, but for many individuals who had invested, it meant financial ruin.

1947

Chuck Yeager was the first man to fly faster than the speed of sound. He accomplished this on October 14 in a Bell X-1 rocket airplane. He set a second record on December 12, 1953 by flying 2½ times the speed of sound in a Bell X-1A.

1963

John F. Kennedy (1917-1963) defeated Richard M. Nixon to become the 35th President of the United States. Kennedy, a Massachusetts democrat, was the youngest man to be elected president, the first president to be born in the 1900s, and the first president of the Roman Catholic faith. In his inaugural address he is most remembered for the quote "Ask not what your country can do for you—ask what you can do for your country." He was assassinated by Lee Harvey Oswald on November 22, 1963 in Dallas, Texas after 2 years and 10 months in office.

1968

Martin Luther King (1929-1968), clergyman, was the most influential civil rights leader of the 1950s and 1960s. The power of his nonviolent resistance began with King's leadership in getting public transportation desegregated in 1956. He was also a strong force in the passage of the 1964 Civil Rights Act and was awarded the Nobel Peace Prize for his nonviolent struggle against racial oppression also in 1964. He was assassinated in 1968 at the "Poor People's Campaign" march he had organized to fight against poverty. King is only the second American whose birthday is observed as a national holiday.

1969

Neil Armstrong was the first man on the Moon. Apollo II, launched from Cape Kennedy and piloted by M. Collins orbits around the Moon and lands the Lunar Module with Armstrong and E. Aldrin. They remained for 21 hours. Armstrong stepped onto the Moon's surface on July 21 and stated "It's one small step for man, one giant leap for mankind."

1977

The first **Apple Personal Computer** was marketed. The Apple I Computer was built by Steve Jobs and Stephen Wozniak in their garage. Small enough to fit in a briefcase it had no case or keyboard. The next generation was the Apple II in 1979. This was the first personal computer to be used without a mainframe computer.

1980

Eric Heiden, an American speed skater, won an unprecedented five gold medals in the 1980 Winter Olympics at Lake Placid, NY. The first recorded Olympic Games were held in ancient Greece in 776 B.C. A festival of athletic games and contests of choral poetry and dance was celebrated every four years on the plain of Olympia in honor of the Olympian Zeus. First modern Olympics in Athens was held in 1896. Then, in 1924, the first Winter Olympics were held in Chamonix, France.
